Statement of Purpose

Respected Sir/Madam,

Introduction

I am I was born onin....., Ward No.,District, Nepal. I live with my mother, father and younger sister who are always there for me at every stage of my life.

My Academic Background

After completing my Secondary Education Examination (S.E.E) in A.D with a G.P.A offromEnglish Secondary School, I went toSecondary School, to continue my higher secondary level studies in science. I completed my higher secondary level education in A.D with the G.P.A ofMy academic achievement had been adequate overall. Regarding linguistic ability, on October 21, 2022, I took the IELTS/PTE exam and obtained an average band score of, with no band score lower than six.

My Personal Life

Since I was young, computers have piqued my curiosity. This is because when I was just eleven years old, my father gave me a computer. I used to utilize a variety of software at the time, and I used to wonder how such things were possible when I saw how accurate and quick the software was. Mahabir Pun the key person of National Innovation Center of Nepal served as an inspiration to me when I was a young man because of the considerable work he did in rural communities to promote awareness, education, and health by employing wireless technology to connect those far-flung locations to the internet. Then, considering that my country is somewhat behind in terms of modern technology, I considered continuing my further education in computer programming as a way to give back to my country. Because of these reasons, I decided to enroll in Ontario College Diploma of Computer Programming (Co-op) (CMPG) at Georgian College at Barrie Campus of Georgian College, Canada for the duration of September 05, 2023 to April 17, 2025.

Reason for Pursing Canada and Ontario

Around the world, computer programming is one of the employment sectors that is expanding the fastest, making it a great option for highly driven international students wishing to further their careers. Ontario is one of the most sought-after provinces in Canada since it has a number of education providers that provides graduate certifications in computer programming and pay graduates the highest average incomes. Programs in computer programming will enable me to acquire practical knowledge, skills, and ethics as well as business practices, equipment, and methods. Additionally, because I was raised in a Himalayan region, I have always enjoyed a chilly climate. Therefore, the weather in Canada is another reason why I decided to study in Canada. Moreover, it is a fact that Canada has the best research results and the best technology in the world. I want to increase my knowledge and want the global exposure along with interaction with people of different ethnicities, which we get in Canada, is undoubtedly unique. Best of all, the Canadian education system has a great deal of flexibility and freedom of choice. In addition, Canada is also widely considered one of the safest places to live.

Why Georgian College?

I did some online research and sought out counselor advice before opting to study abroad. Additionally, I went to a number of educational fairs and exhibitions where I learned more about

Georgian College's extensive course offerings. Speaking of Georgian College, it is one of the top Colleges providing students not only the best education possible, but also cultural opportunities to enrich their education. Not only this but Georgian College provides its students with a comprehensive program of career-focused and skills-based classes that cover a variety of professional fields. Georgian College has one of the greatest graduate employment rates in Ontario and supports a vibrant entrepreneurial culture. According to the college, 6200 firms partner with Georgian to provide student work experiences, 85.8% of alumni find jobs within six months of graduation, and all of their programs place a strong emphasis on practical, hands-on learning. Because of their compelling arguments, I have chosen to study at Georgian College in Canada. Summing up all of these the education system of Georgian College has impressed me to choose Georgian College for my undergraduate degree.

Why Ontario College Diploma of Computer Programming (co-op) (CMPG)?

As mentioned above, I had keen interest in computer programming from the day I touched computer. I was always fascinated with the reliability and speed of computers and software on it. Because of these reasons I thought of continuing my course in computer related field in high school. And after this I wanted to gain experience developing many kind of software on many different platforms like desktop, mobile and mainframe systems. This course will allow me to gain knowledge about variety programming languages such as Arduino, ASP.NET, C+, Java, Javascript, HTML/CSS, PHP and swift. Since, I always wanted to become a computer programmer in the future; this course will help me gain proper experience in that field.

Why not Nepal?

The competition for scholarships in Nepal is fierce, which is one of the major reasons I am applying to study in Canada rather than staying here. Nepal is steadily improving in terms of the education sector, which is undoubtedly narrowing the scopes of available scholarships. I also researched a number of colleges in Nepal, but none lived up to my expectations. In addition, I read testimonials from many notable college graduates who persuaded me that if I wanted to pursue a career in computer programming, I should look at institutions overseas, with Canada being one of the most popular choices currently. Second, since I will be returning to Nepal after completing study, I would definitely want a legitimate job with a legitimate income. It has been discovered that international students who have returned to their home countries have more employment opportunities than native students do for some unexplained reason that is why I am persuaded to go to Canada rather than studying in Nepal.

Future Career Plan

I will continue my study after completing my degree at Georgian College in order to develop my academic knowledge and abilities at various Canadian institutions and universities. I will eventually return back to my home country to employ all the knowledge and abilities I have gained there. Additionally, when I return to my country Nepal, there are numerous opportunities for me as a computer programmer in various organizations like Verisk Nepal, Leapfrog Technology Inc., Cotiviti Nepal and many more. The starting salary of a Computer Programmer here in Nepal ranges from somewhere around 600 CAD in the beginning and it extends up to 1900 CAD and above with some years of experiences. In addition, once I have a significant amount of experience, I intend to launch my own business that manages various projects in my own country Nepal.

Family ties and return to Nepal

My family has always supported me through both my successes and failures, and they will keep inspiring me to advance in life. I must therefore take care of and support my family in their old age, as I am the only son. My family has always been my top focus. My family has a strong network in Nepal, which will make it simpler for me to launch my own company when I return after acquiring the necessary skills and expertise. I cherish my own culture and traditions, so I do not see me residing in Canada for an extended period. In addition, many people will be happy for me and help me succeed in Nepal. My primary reason for travelling to Canada is to pursue my academic interests,

establish as many foreign contacts as I can, and earn a degree that will be respected around the world. This will enable me to return to Nepal more imaginative and creative.

Financial Arrangements

My parents will be responsible for covering all potential costs associated with my studies in Canada as well as incidentals like travel, lodging, and other costs. They are financially secure and have enough money on hand to cover all expenses at the time of exposure. My mother is a who creates and carries out marketing strategy and plans for She makes aboutCAD a year and my father is the employee at He earns aboutCAD per year. Apart from this my family makes aroundCAD through agriculture and animal husbandry in addition to all these source of income they generate aboutCAD annually through house rent and land lease. The total value of my family's property is approximatelyCAD, and they have a bank balance ofCAD inBank Limited, one of the reputed 'A' class commercial banks of Nepal. I can therefore declare that my financial status is good and that I will use these funds for my stay and other costs in Canada. I have already paid the entire course fee, so I will not have any issues with paying for my education and living expenses while I am in Canada.

Declaration

All of the things I have said are true and I recognize that my visa will be denied if any fraud is discovered in the paperwork,I have submitted. Since I want to finish my school in Canada, I would not want to take any chances.Finally, I want to make it clear that I am an actual temporary immigrant to Canada who is only there to pursue an education and develop my talents abroad. Studying in Canada will allow me to begin a new chapter in my life. I promise to adhere to all visa requirements, not breach any rules or laws of the educational institution or the Canadian government, and to return home once my studies are over. I sincerely hope you will give me the chance to study in Canada so I can earn a degree that is recognized internationally and succeed in my career. I am anticipating to hearing positive from you.

Thank You!

Respectfully submitted,
